Book Synopsis

Stock market - trade, earn passive income and become financially free! It is likely that you have heard the terms "NYSE" and "Wall Street" countless times before. However, you don't know what those terms exactly mean. Basically, a "stock exchange" is an organization that lets individuals (or groups of people) trade stocks. It is a combination of an auction and an ordinary market. It is an auction because the prices of stocks depend on the numbers set by the buyers and sellers. It is an "ordinary market" because it serves as a gathering area for people who want to offer or acquire products. People and stocks enter the exchange every day. Traders and investors differ in terms of their goals, strategies, and purchasing capacity. Stocks, on the other hand, differ when it comes to their qualities and amounts. The differences between stocks and people cause changes in stock prices. Just like other things in life, the stock market benefits from technological advancements. For example, it uses computers to process transactions simultaneously. It also allows people to trade stocks through the internet. These days, you can find a stockbroker and create a stock portfolio using your computer. A trade happens when the price of a stock is desirable for a buyer and a seller. Obviously, transactions won't occur if the price is too high for the buyer or too low for the seller. Using a network of computers, stock exchanges show the price that sellers and buyers want...
